**Nokia**

**NOKIA**

# Moving towards MeeGo

- Maemo 5, the 4th step in the evolution towards a mainstream operating system

- Nokia N900, leading browsing and multitasking experience

- In total, more than 5 years of open source development with software integration in-house

# Things we learn from Nokia N900 for future MeeGo devices

## Browser usage on same level than phone and messaging in UK

**Number of Application Launches**

Results are based on Nokia N900 Panel UK consisting of ca. 200 people during January and February 2010. Participants volunteered to participate with the 360 application preinstalled on their devices. They were invited from continuous Smartphone360 panel with Symbian devices allowing us also to compare usage changes when moving to Nokia N900.

# How could we focus better on user experiences?

# How could we share more?

Open source project

We made it rather clear in October 2009 during OSIM World

Maemo, Moblin, LIMO, even Android use a lot of the same open source components,...

... but we integrate and release separately.
